

Kimberley - Creating awareness of climate change

What was your goal and what did you achieve?

Awareness about how climate change affects things and how we need to do something about it. I created a PowerPoint of climate change and presented it to my classroom - about 30 students - about how much affect it does and how dangerous it is. People need to know about it.

What is your advice to other students?

I would advise them to keep doing what you're doing, even if it goes wrong or little kids laugh at you, or anything. Just keep doing it.

This case study was transcribed from an interview. These are Kimberley's words and opinions.

What are your next steps?

I've finished it, but I might present it at assembly.

Your biggest success so far

The biggest success is basically telling them how much the greenhouse gas affects the climate, the causes of it and what we can do about it.

What did you enjoy most?

I enjoyed the awareness of telling people, obviously it wasn't good because they didn't know, but me telling them, their reaction was very good - they felt sorry and they want to do something about it.
